

Push Performance

ProBag

The lifetime of synthetic disc filter bags depends upon sector support, execution and quality. To *improve performance* and to simplify installation, we have combined our standard disc filter bag with an integrated, heavy-duty protector sheet. This increases the length of life and performance, even when disc filter sector support is far from optimal.

ProBag can prolong service intervals when used with substandard sector designs or quality. ProBag even allows the use of old, broken or damaged sectors until the next planned service, protecting the filter bag from damage due to sharp edges or broken wires. When installed in extremely abrasive applications, ProBag can help return performance to normal standards.

Installing ProBag is just as easy as for a standard disc filter bag. It is delivered as one unit, carefully packed and super simple to install using the accompanying installation manual.
