

## Composite filter frames

TP-Filter has developed a unique, full-composite filter frame that can be fully adapted for any disc filter equipment for **freshwater, wastewater and process water microfiltration**.

The **symmetrical** frame with fully embedded mesh reduces stresses and loading on the mesh, eliminating any risk of it peeling away from the frame and thus reducing the need to keep large numbers of spare parts.

These light, **full-composite** frames reduce loading on the disc filter shaft and bearings, reduce freight costs, and simplify both maintenance and the disposal of used panels.

The **SmartScreen** filter panel concept includes the full range of mesh types and mesh openings normally used, typically 10–1000 microns. Careful marking with article and batch numbers means it is easy to follow up on the performance of a **SmartScreen** filter panel!
