

Minimal maintenance

Disc filter sectors are normally covered with shrinkable synthetic mesh tailored to filter bags. This has been the norm for long.

An acid proof stainless steel mesh has the great advantage being very easy to keep clean. Giving consistent performance. But early installations on various types of sectors has seldom resulted in long lifetime due to fatigue.

Now there is a way to install stainless steel mesh on disc filter sectors of nearly any type to secure the best chance for a long lifetime and low maintenance costs. SuperFlats.

SuperFlats can also be combined with *SuperSector* to recycle old broken disc filter sectors.
